

A Model architecture

Docking network

$$c = E_t(t) + E_\sigma(\log \sigma)$$

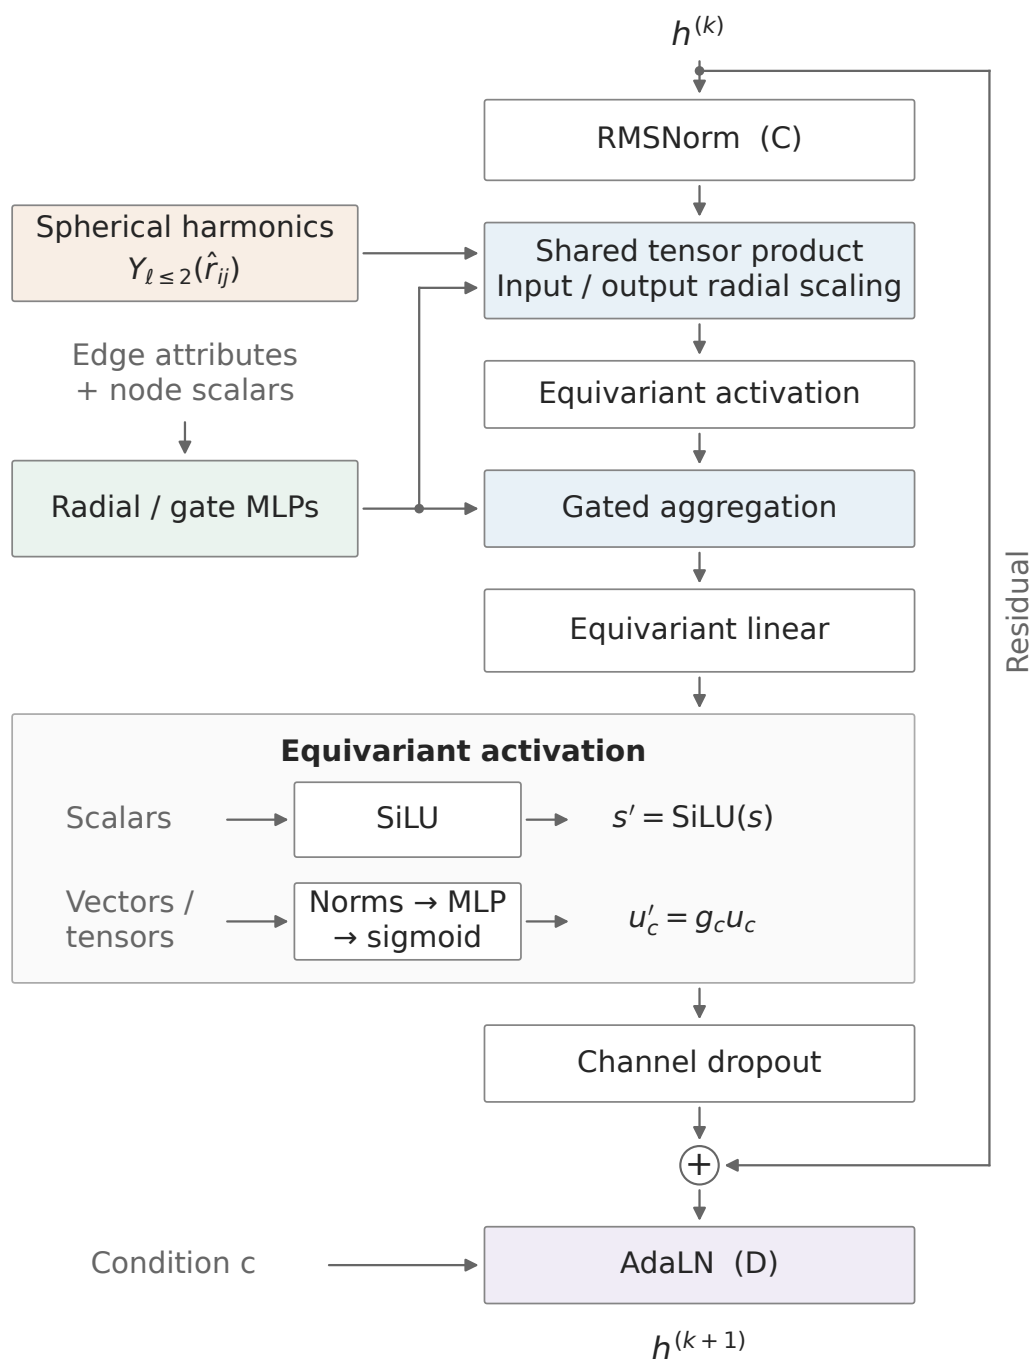

Confidence network

Independent weights; $c = 0$

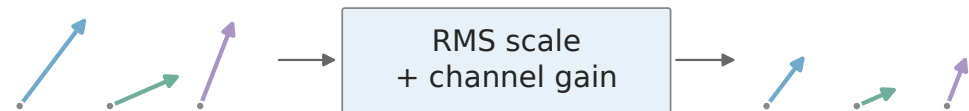

B Interaction layer

C Equivariant RMSNorm

One irrep block

Normalized block

$$r_b = \sqrt{\frac{1}{C_b} \sum_c \|h_{b,c}\|^2 + \epsilon}$$

$$\hat{h}_{b,c} = a_{b,c} h_{b,c} / r_b$$

D Equivariant AdaLN
